

Trust Score Update

Pre-conditions :
 A Member object must exist with a verified status and a specific userId.

A Tool must be linked to a Rental record with a defined condition (e.g., Good).

The current TrustScore object must be linked to the member to provide the starting score.

Post-conditions :
 The score value in the TrustScore object is updated based on the rental performance.

The member's trustScore attribute is synchronized with the new calculated score.

- The lastUpdate attribute in the TrustScore object is changed to the current date.
