

1. Pre-conditions These requirements must be met before the operation can be executed:

- User Authentication:** A registered user (e.g., Ali) with a valid system ID must be logged into the application.
- Resource Availability:** The requested tool (Drill) must have its current status set to "Available".
- Financial Eligibility:** The user must have a recognized rating (currently 4.5) to proceed with renting high-value items.
- Valid Duration:** The selected booking timeframe (2026-05-01 to 2026-05-03) must not conflict with existing schedules.

2. Post-conditions

These represent the guaranteed state of the system after the operation is successfully completed:

Booking Records: A new booking entity (booking1) is successfully generated in the database.

Status Update: The tool status is transitioned from "Available" to "Booked" or "Reserved" to prevent double-booking.

Transaction Calculation: The total cost is computed based on the pricePerDay (50) multiplied by the duration of the stay.

Temporal Logging: The system records the exact startDate and endDate assigned to this specific user ID.
